WARNINGS REGARDING SERVICING OF SUPPLEMENTAL RESTRAINT SYSTEM (SRS) EQUIPPED VEHICLES

WARNING!

(1) Improper service or maintenance of any component of the SRS, or any SRS-related component, can lead to personal injury or death to service personnel (from inadvertent firing of the air bag) or to the driver and passenger (from rendering the SRS inoperative).

(2) Service or maintenance of any SRS component or SRS-related component must be performed only at an authorized MITSUBISHI dealer.

(3) MITSUBISHI dealer personnel must thoroughly review this manual, and especially its GROUP 52B - Supplemental Restraint System (SRS) before beginning any service or maintenance of any component of the SRS or any SRS-related component.

NOTE

The SRS includes the following components: SRS-ECU, SRS warning lamp, air bag module, clock spring, side impact sensors and interconnecting wiring. Other SRS-related components (that may have to be removed/installed in connection with SRS service or maintenance) are indicated in the table of contents by an asterisk (*).
MANUAL AIR CONDITIONER

GENERAL INFORMATION

The heater system uses a two-way-flow full-air-mix system that features high performance and low operating noise, and includes an independent face air blowing function. The A/C system is basically the same as the conventional system, but a new refrigerant system has been adopted as a response to restrictions on the use of chlorofluorocarbons. In addition, an air purifier which carries out fine A/C control has been included.

</tbody>
</table>

SAFETY PRECAUTIONS

Because R-134a refrigerant is a hydrofluorocarbon (HFC) which contains hydrogen atoms in place of chlorine atoms, it will not cause damage to the ozone layer.

Refrigerant R-134a is transparent and colourless in both the liquid and vapour state. Since it has a boiling point of -29.8°C, at atmospheric pressure, it will be a vapour at all normal temperatures and pressures. The vapour is heavier than air, non-flammable, and nonexplosive. The following precautions must be observed when handling R-134a.

Caution

Wear safety goggles when servicing the refrigeration system.

R-134a evaporates so rapidly at normal atmospheric pressures and temperatures that it tends to freeze anything it contacts. For this reason, extreme care must be taken to prevent any liquid refrigerant from contacting the skin and especially the eyes. Always wear safety goggles when servicing the refrigeration part of the A/C system. Keep a bottle of sterile mineral oil handy when working on the refrigeration system. Should any liquid refrigerant get into the eyes, use a few drops of mineral oil to wash them out. R-134a is rapidly absorbed by the oil. Next splash the eyes with plenty of cold water. Call your doctor immediately even though irritation has ceased after treatment.
Caution
Do not heat R-134a above 40°C

In most instances, moderate heat is required to bring the pressure of the refrigerant in its container above the pressure of the system when charging or adding refrigerant.
A bucket or large pan of hot water not over 40°C is all the heat required for this purpose. Do not heat the refrigerant container with a blow torch or any other means that would raise temperature and pressure above this temperature. Do not weld or steam clean on or near the system components or refrigerant lines.

Caution
Keep R-134a containers upright when charging the system.

When metering R-134a into the refrigeration system keep the supply tank or cans in an upright position.
If the refrigerant container is on its side or upside down, liquid refrigerant will enter the system and damage the compressor.

Caution
1. The leak detector for R-134a should be used to check for refrigerant gas leaks.
2. Do not allow liquid refrigerant to touch bright metal.

Refrigerant will tarnish bright metal and chrome surfaces, and in combination with moisture can severely corrode all metal surfaces.

SIGHT GLASS REFRIGERANT LEVEL TEST

The sight glass is a refrigerant level indicator. To check the refrigerant level, clean the sight glass and start the vehicle engine. Push the A/C button to operate the compressor, place the blower switch to high and move the temperature control lever to max cool. After operating for a few minutes in this manner, check the sight glass.

1. If the sight glass is clear, the magnetic clutch is engaged, the compressor discharge line is warm and the compressor inlet line is cool; the system has a full charge.
2. If the sight glass is clear, the magnetic clutch is engaged and there is no significant temperature difference between compressor inlet and discharge lines; the system has lost some refrigerant.
3. If the sight glass shows foam or bubbles, the system could be low on charge. The system has to be recharged with refrigerant.

MAGNETIC CLUTCH TEST

1. Disconnect the connector (1-pin) to the magnetic clutch.
2. Connect battery (+) voltage directly to the connector for the magnetic clutch.
3. If the magnetic clutch is normal, there will be “click”. If the pulley and armature do not make contact (‘click’), there is a malfunction.

RECEIVER DRIER TEST

Operate the unit and check the piping temperature by touching the receiver drier outlet and inlet.
If there is a difference in the temperatures, the receiver drier is restricted.
Replace the receiver drier.
DUAL PRESSURE SWITCH CHECK

1. Remove the dual pressure switch connector and connect the high/low pressure side terminals located on the harness side as shown in the illustration.
2. Install a gauge manifold to the high-pressure side service valve of the refrigerant line. (Refer to Performance Test.)
3. When the high/low pressure sides of the dual pressure switch are at operation pressure (ON) and there is continuity between the respective terminals, then the condition is normal. If there is no continuity, replace the switch.

COMPRESSOR DRIVE BELT ADJUSTMENT

Refer to GROUP 11 - On-vehicle Service.
CHARGING

1. With the handles turned back all the way (valve closed), install the adaptor valve to the low-pressure side of the gauge manifold.
2. Connect the charging hose (blue) to the adaptor valve.
3. Connect the quick joint (for low pressure) to the charging hose (blue).
4. Connect the quick joint (for low pressure) to the low pressure service valve.

NOTE
The low-pressure service valve should be connected to the suction flexible hose.

Caution
(1) Use tools that are suited to R-134a.
(2) To install the quick joint, press section “A” firmly against the service valve until a click is heard. When connecting, run your hand along the hose while pressing to ensure that there are no bends in the hose.

5. Close the high and low-pressure valves of the gauge manifold.
6. Install the vacuum pump adaptor to the vacuum pump.
7. Connect the vacuum pump plug to the vacuum pump adaptor.
8. Connect the charging hose (yellow) to the R-134a connection port of the vacuum pump adaptor.
9. Tighten the adaptor valve handle (valve open).
10. Open the low-pressure valve of the gauge manifold.
11. Turn the power switch of the vacuum pump to the ON position.

NOTE
Even if the vacuum pump power switch is turned ON, the vacuum pump will not operate because of the power supply connection in step (7).
12. Turn the vacuum pump adaptor switch to the R-134a side to start the vacuum pump.

**Caution**
*Do not operate the compressor for evacuation.*

13. Evacuate to a vacuum reading of 100 kPa or higher (takes approx. 10 minutes).

14. Turn the vacuum pump adaptor switch OFF and allow to stand it for 5 minutes.

**Caution**
*Do not operate the compressor in the vacuum condition; damage may occur.*

15. Carry out a leak test. (Good if the negative pressure does not drop.)

**Caution**
*If the negative pressure drops, increase the tightness of the connections, and then repeat the evacuation procedure from step (12).*

16. With the handle turned back all the way (valve open), install the charging valve to the service can.

17. Turn the handle of the adaptor valve back all the way (valve closed), remove it from the gauge manifold and install the service can.

18. Tighten the handle of the charging valve (valve closed) to puncture the service can.
19. Turn the handle of the charging valve back (valve open) and tighten the handle of the adaptor valve (valve open) to charge the system with refrigerant.

**Caution**
If the service can is inverted, liquid refrigerant may be drawn into the compressor damaging it by liquid compression. Keep the service can upright to ensure that refrigerant is charged in gas state.

20. If the refrigerant is not drawn in, turn the handle of the adaptor valve back all the way (valve closed).

   If a gas leak is detected, re-tighten the connections, and then repeat the charging procedure from evacuation in step (12).

**Caution**
The leak detector for R-134a should be used.

22. Start the engine.

23. Operate the A/C and set to the lowest temperature (MAX. COOL).

24. Fix the engine speed at 1,500 r/min.

25. Tighten the handle of the adaptor valve (valve open) to charge the required volume of refrigerant.

**Caution**
If the service can is inverted, liquid refrigerant may be drawn into the compressor damaging it by liquid compression. Keep the service can upright to ensure that refrigerant is charged in gas state.

26. After charging with refrigerant, turn the handle of the adaptor valve back all the way (valve closed).

27. Tighten the charging valve handle (valve closed).
   Remove the quick joint (for low pressure) from the low-pressure service valve.

**NOTE**
If the service can is not emptied completely, keep the handles of the charging valve and adaptor valve closed for the next charging.
CORRECTING LOW REFRIGERANT LEVEL IN CASE THE SERVICE CAN IS USED.

1. Install the charging valve with the handle turned all the way back (valve open) to the service can.
2. Install the adaptor valve with the handle turned all the way back (valve close) to the charging valve.
3. Connect the charging hose (blue) to the adaptor valve.
4. Connect the charging hose (blue) to the quick joint (for low pressure).
5. Tighten the handle of the charging valve (valve close), and pierce the service can.
6. Turn the handle of the adaptor valve to bleed the air.
7. Install the quick joint (for low pressure) to the low-pressure service valve.

**NOTE**
The low-pressure service valve should be connected to the suction flexible hose.

8. Start the engine.
9. Operate the air conditioner and set at the lowest temperature (MAX. COOL).
10. Fix the engine speed at 1,500 r/min.
11. Tighten the handle of the adaptor valve (valve open), and replenish refrigerant while checking the quantity through the sight glass.

**Caution**
If the service can is inverted, liquid refrigerant may be draw into the compressor damaging it by liquid compression. Keep the service can upright to ensure that refrigerant is changed in gas state.

12. After replenishing is completed, turn the handle of the adaptor valve all the way back (valve close), and remove the quick joint.

**NOTE**
When there is remainder of refrigerant in the service can, keep it for next use with the charge value and the valve of the adaptor valve being closed.
DISCHARGING SYSTEM

1. Run the engine at an engine speed of 1,200 - 1,500 r/min for approximately 5 minutes with the A/C operating to return to the oil.

   NOTE
   Returning the oil will be more effective if it is done while driving.

2. Stop the engine.

3. Connect the charging hose (blue) to the adaptor valve with its handle turned back all the way (valve closed).

4. Connect the quick joint to the charging hose (blue).

5. Install the quick joint to the low-pressure service valve.

   NOTE
   The low-pressure service valve should be connected to the suction flexible hose.

   Caution
   To connect the quick joint, press section “A” firmly against the service valve until a click is heard.
   When connecting, run your hand along the hose while pressing to ensure that there are no bends in the hose.

6. Place the adaptor valve inside the container and discharge the refrigerant by opening the handle gradually so that oil does not gush out.

   NOTE
   Any oil remaining in the container should be returned to the A/C system.

REFILLING OF OIL IN THE A/C SYSTEM

Too little oil will provide inadequate compressor lubrication and cause a compressor failure. Too much oil will increase discharge air temperature.

When a compressor is installed at the factory, it contains 120 mL of refrigerant oil. While the A/C system is in operation, the oil is carried through the entire system by the refrigerant. Some of this oil will be trapped and retained in various parts of the system.

When the following system components are changed, it is necessary to add oil to the system to replace the oil being removed with the component.

**Compressor oil: SUN PAG 56**

**Quantity**
- Condenser: 15 mL
- Evaporator: 60 mL
- Suction hose: 10 mL
- Receiver: 10 mL
PERFORMANCE TEST

1. The vehicles to be tested should be in a place that is not in direct sunlight.
2. Close the high and low-pressure valve of the gauge manifold.
3. Connect the charging hose (blue) to the low-pressure valve and connect the charging hose (red) to the high-pressure valve of the gauge manifold.
4. Install the quick joint (for low pressure) to the charging hose (blue), and connect the quick joint (for high pressure) to the charging hose (red).
5. Connect the quick joint (for low pressure) to the low-pressure service valve and connect the quick joint (for high pressure) to the high-pressure service valve.

NOTE
The high-pressure service valve is on liquid pipe B and the low-pressure service valve is on the suction flexible hose.

Caution
To connect the quick joint, press section “A” firmly against the service valve until a click is heard. When connecting, run your hand along the hose while pressing to ensure that there are no bends in the hose.

6. Start the engine.
7. Set the controls to the A/C as follows:
   - A/C switch: A/C - ON position
   - Mode selection: Face position
   - Temperature control: Max. cooling position
   - Air selection: Recirculation position
   - Blower switch: HI (Fast) position
8. Adjust engine speed to 1,000 r/min with A/C clutch engaged.
9. Engine should be warmed up with doors and windows closed.
10. Insert a thermometer in the left center A/C outlet and operate the engine for 20 minutes.
11. Note the discharge air temperature.

NOTE
If the clutch cycles, take the reading before the clutch disengages.

REFRIGERANT LEAK REPAIR  
LOST CHARGE

If the system has lost all charge due to a leak:
1. Evacuate the system. (See procedure.)
2. Charge the system with approximately one pound of refrigerant.
3. Check for leaks.
4. Discharge the system.
5. Repair leaks.
6. Replace receiver drier.

**Caution**
Replacement filter-drier units must be sealed while in storage. The drier used in these units will saturate water quickly upon exposure to the atmosphere. When installing a drier, have all tools and supplies ready for quick reassembly to avoid keeping the system open any longer than necessary.

7. Evacuate and charge system.

LOW CHARGE

If the system has not lost all of its refrigerant charge; locate and repair all leaks. If it is necessary to increase the system pressure to find the leak (because of an especially low charge) add refrigerant. If it is possible to repair the leak without discharging the refrigerant system, use the procedure for correcting low refrigerant level.

HANDLE TUBING AND FITTINGS

Kinks in the refrigerant tubing or sharp bends in the refrigerant hose lines will greatly reduce the capacity of the entire system. High pressures are produced in the system when it is operating. Extreme care must be exercised to make sure that all connections are pressure tight. Dirt and moisture can enter the system when it is opened for repair or replacement of lines or components. The following precautions must be observed. The system must be completely discharged before opening any fitting of connection in the refrigeration system. Open fittings with caution even after the system has been discharged. If any pressure is noticed as a fitting is loosened, allow trapped pressure to bleed off very slowly.

Never attempt to rebend formed lines to fit. Use the correct line for the installation you are servicing. A good rule for the flexible hose lines is keep the radius of all bends at least 10 times the diameter of the hose.

Sharper bends will reduce the flow of refrigerant. The flexible hose lines should be routed so that they are at least 80 mm from the exhaust manifold. It is good practice to inspect all flexible hose lines at least once a year to make sure they are in good condition and properly routed.

Unified plumbing connections with O-rings, these O-rings are not reusable.
COMPRESSOR NOISE

You must first know the conditions when the noise occurs. These conditions are: weather, vehicle speed, in gear or neutral, engine temperature or any other special conditions. Noises that develop during A/C operation can often be misleading. For example: what sounds like a failed front bearing or connecting rod, may be caused by loose bolts, nuts, mounting brackets, or a loose clutch assembly. Verify accessory drive belt tension (power steering or alternator). Improper accessory drive belt tension can cause a misleading noise when the compressor is engaged and little or no noise when the compressor is disengaged. Drive belts are speed-sensitive. That is, at different engine speeds, and depending upon belt tension, belts can develop unusual noises that are often mistaken for mechanical problems within the compressor.

ADJUSTMENT

1. Select a quiet area for testing. Duplicate conditions as much as possible. Switch compressor on and off several times to clearly identify compressor noise. To duplicate high ambient conditions (high head pressure), restrict air flow through condenser. Install manifold gauge set to make sure discharge pressure doesn't exceed 2,070 kPa.
2. Tighten all compressor mounting bolts, clutch mounting bolt, and compressor drive belt. Check to assure clutch coil is tight (no rotation or wobble).
3. Check refrigerant hoses for rubbing or interference that can cause unusual noises.
4. Check refrigerant charge. (See "Charging System").
5. Recheck compressor noise as in Step 1.
6. If noise still exists, loosen compressor mounting bolts and retorque. Repeat Step 1.
7. If noise continues, replace compressor and repeat Step 1.

POWER RELAY CHECK

BLOWER RELAY

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

FAN CONTROL RELAY
Refer to GROUP 14 - Radiator.
IDLE-UP OPERATION CHECK

1. Before inspection and adjustment, set vehicle in the following condition:
   - Engine coolant temperature: 80 - 90°C
   - Lights, electric cooling fan and accessories: Set to OFF
   - Transmission: Neutral (N or P for vehicles with A/T)
   - Steering wheel: Straightforward

2. Check whether or not the idle speed is the standard value.

   **Standard value:**
   - <4G6> 750 ± 50 r/min
   - <6A1> 650 ± 50 r/min
   - <4D6> 800 ± 30 r/min

3. When the A/C is running after turning the A/C switch to ON, and the blower switch to the MH or HI position, check to be sure that the idle speed is at the standard value.

   **Standard value:**

<table>
<thead>
<tr>
<th>Engine</th>
<th>Idle speed r/min</th>
<th>When load by A/C is low</th>
<th>When load by A/C is high</th>
</tr>
</thead>
<tbody>
<tr>
<td>4G6</td>
<td>750 ± 50</td>
<td>850 ± 50</td>
<td></td>
</tr>
<tr>
<td>6A1</td>
<td>650 ± 50</td>
<td>900 ± 50</td>
<td></td>
</tr>
<tr>
<td>4D6</td>
<td>850 ± 50</td>
<td>850 ± 50</td>
<td></td>
</tr>
</tbody>
</table>

**NOTE**

1. The engine-ECU determine whether the load by A/C is low or high according to the output signal from the automatic compressor-ECU <manual A/C> or the A/C-ECU <automatic A/C>.

2. There is no necessity to make an adjustment, because the idle speed is automatically adjusted by the ISC system. If, however, there occurs a deviation from the standard value for some reason, check the ISC system. (Refer to GROUP 13A - On-vehicle Service.)
HEATER CONTROL ASSEMBLY, A/C SWITCH AND INSIDE/OUTSIDE AIR CHANGEOVER SWITCH

REMOVAL AND INSTALLATION

PRE-REMOVAL AND POST-INSTALLATION OPERATION

- Center Console Panel, Side Cover Removal and Installation (Refer to GROUP 52A - Instrument Panel.)
- Radio, Tape Player Removal and Installation (Refer to GROUP 54.)

REMOVAL STEPS

1. Air mix damper cable connection
2. Air outlet changeover damper cable connection
3. Rear window defogger switch
4. A/C switch
5. Inside/outside air changeover switch
6. Heater control assembly

INSTALLATION SERVICE POINTS

AIR OUTLET CHANGEOVER DAMPER CABLE CONNECTION

1. Set the air outlet changeover control knob on the heater control assembly to the DEF position.
2. Set the air outlet changeover damper lever of the heater unit to the DEF position (turn clockwise the damper lever until it stops), and then connect the to cable to the lever.

AIR MIX DAMPER CABLE CONNECTION

1. Set the temperature control knob on the heater control assembly to the MAX HOT position.
2. Set the air mix damper lever of the heater unit to the MAX HOT position (turn clockwise the damper lever until it stops), and then connect the cable to the lever.
**INSPECTION**

**BLOWER SWITCH CONTINUITY CHECK**

<table>
<thead>
<tr>

HEATER CONTROL ASSEMBLY
DISASSEMBLY AND REASSEMBLY

Disassembly steps
1. Knob assembly
2. Bulb harness
3. Air outlet changeover damper cable
4. Air mix damper cable
5. Heater control panel
6. Nut
7. Blower switch
8. Control base assembly

DISASSEMBLY SERVICE POINT
AIR OUTLET CHANGEOVER DAMPER CABLE/AIR MIX DAMPER CABLE REMOVAL
Insert a flat-tipped screwdriver into the control base clip from inner side, and then remove the cable by lifting the claw part of the clip.
HEATER UNIT, HEATER CORE, AND BLOWER UNIT

REMOVAL AND INSTALLATION

Pre-removal and Post-installation Operation
- Under Cover Removal and Installation (Refer to P.55-33.)
- Instrument Panel removal and Installation (Refer to GROUP 52A.)

Caution: SRS
When removing and installing the heater unit from vehicles equipped with SRS, do not let it bump against the SRS-ECU or the components.

Vehicles with automatic A/C

Heater unit and heater core removal steps
- Center reinforcement (Refer to GROUP 52A - Instrument panel.)
- Center duct assembly and foot distribution duct (Refer to P.55-33.)
- Draining and refilling engine coolant (Refer to GROUP 14 - On-vehicle service.)
1. Heater hose connection
2. Evaporator mounting bolt and nut
3. Heater unit
4. Heater core

Blower unit removal steps
2. Evaporator mounting bolt and nut
5. Clip
6. Blower unit

REMOVAL SERVICE POINT

HEATER UNIT REMOVAL
After sliding the cooling unit towards you slightly, remove the heater unit.
RESISTOR, BLOWER FAN AND MOTOR, AND INSIDE/OUTSIDE AIR CHANGEOVER DAMPER MOTOR

REMOVAL AND INSTALLATION

Pre-removal and Post-installation Operation
Glove Box Removal and Installation (Refer to GROUP 52A - Instrument Panel.)

Resistor removal steps
- Under cover (Refer to P.55-33.)
  1. Resistor

Blower fan and motor removal steps
- Under cover (Refer to P.55-33.)
  2. Blower fan and motor

Inside/outside air changeover damper motor removal
  3. Inside/outside air changeover damper motor

INSPECTION

BLOWER FAN AND MOTOR CHECK
When battery voltage is applied between the terminals, check that the motor operates. Also, check that there is no abnormal noise.
**RESISTOR CHECK**

Use a circuit tester to measure the resistance between the terminals as indicated below. Check that the measured value is at the standard value.

**Standard value:**

<table>
<thead>
<tr>
<th>Measurement terminal</th>
<th>Standard value $\Omega$</th>
</tr>
</thead>
<tbody>
<tr>
<td>Between terminals 3 and 2 (LO)</td>
<td>2.30</td>
</tr>
<tr>
<td>Between terminals 3 and 4 (ML)</td>
<td>1.10</td>
</tr>
<tr>
<td>Between terminals 3 and 1 (MH)</td>
<td>0.40</td>
</tr>
</tbody>
</table>

**INSIDE/OUTSIDE CHANGEOVER DAMPER MOTOR CHECK**

<table>
<thead>
<tr>
<th>Battery connection terminal</th>
<th>Lever operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>+   -   O</td>
<td>Moves to the outside air position</td>
</tr>
<tr>
<td>-   +   O</td>
<td>Moves to the inside air position</td>
</tr>
</tbody>
</table>

**Caution**

Cut off the battery voltage when the damper is in the inside air position or outside air position.
EVAPORATOR

REMOVAL AND INSTALLATION

Pre-removal and Post-installation Operation
- Discharging and Charging of Refrigerant (Refer to P. 55-9.)
- Glove Box, Side Cover and Glove Box Frame Removal and Installation (Refer to GROUP 52A - Instrument Panel.)
- Under Cover Removal and Installation (Refer to P. 55-33.)

Removal steps
1. Suction hose connection
2. Discharge pipe connection
3. O-ring
4. Drain hose
5. Plate
6. Evaporator

REMOVAL SERVICE POINT

SUCTION HOSE, DISCHARGE PIPE DISCONNECTION
Plug the disconnected hose and the evaporator nipple not to let foreign matter get into them.

Caution
Seal the hoses completely, otherwise the compressor oil and receiver will absorb water vapour easily.

INSTALLATION SERVICE POINT

EVAPORATOR INSTALLATION
When replacing the evaporator, refill it with a specified amount of compressor oil and install it (to the vehicle).

Compressor oil: SUN PAG 56
Quantity: 60 mL
**DISASSEMBLY AND REASSEMBLY**

**Compressor oil:** SUN PAG 56

---

**Disassembly steps**

1. Clip
2. Evaporator case (upper)
3. Automatic compressor-ECU <Manual A/C>
4. Air thermo sensor <Automatic A/C>
5. Evaporator case (lower)
6. Expansion valve
7. O-ring
8. Evaporator

---

**DISASSEMBLY SERVICE POINT**

**CLIP REMOVAL**

Remove the clips with a flat-tipped screwdriver covered with a shop towel to prevent damage to case surfaces.
INSPECTION

AIR THERMO SENSOR

When the resistance value between the sensor terminals is measured under two or more temperature conditions, the resistance value should be close to the values shown in the graph.

NOTE
The temperature conditions when testing should not exceed the range of the characteristic curve in the graph.

AIR PURIFIER ASSEMBLY

REMOVAL AND INSTALLATION

Pre-removal and Post-installation Operation
- Glove Box, Side Cover and Glove Box Frame Removal and Installation (Refer to GROUP 52A - Instrument Panel.)
- Under Cover Removal and Installation (Refer to P.55-33.)

COMPRESSOR AND TENSION PULLEY

Refer to P.55-61.
REFRIGERANT LINE

REMOVAL AND INSTALLATION

<L.H. DRIVE VEHICLES>

Pre-removal and Post-installation Operation
- Discharging and Changing of Refrigerant (Refer to P.55-9.)
- Reserve Tank Removal and Installation (Refer to GROUP 14 - Radiator.)
- Oil Reservoir Removal and Installation (Refer to GROUP 37A - Power Steering Hoses.)

Compressor oil: SUN PAG 56

Removal steps
1. Suction pipe
2. Clamp and bracket
3. Suction flexible hose
4. Liquid pipe A
5. Liquid pipe B
6. Dual pressure switch
7. Receiver bracket assembly
8. Receiver assembly
9. Discharge flexible hose
10. O-ring
**Pre-removal and Post-installation Operation**

- Discharging and Changing of Refrigerant (Refer to P.55-9.)
- Canister Removal and Installation (Refer to GROUP 17.)
- Reserve Tank Removal and Installation (Refer to GROUP 14 - Radiator.)
- Oil Reservoir Removal and Installation (Refer to GROUP 37A - Power Steering Hoses.)

---

**Removal steps**

1. Clamp
2. Suction pipe
3. Clamp and bracket
4. Suction flexible hose
5. Liquid pipe B
6. Liquid pipe A
7. Dual pressure switch
8. Receiver bracket assembly
9. Receiver assembly
10. Discharge flexible hose
11. O-ring
REMOVAL SERVICE POINT

Hose/pipe/receiver assembly disconnection

Plug the disconnected hose, the receiver, the evaporator and the compressor nipple not to let foreign matter get into them.

Caution

Seal the hoses completely, otherwise the compressor oil and receiver will absorb water vapour easily.

INSTALLATION SERVICE POINT

Suction hose/receiver assembly installation

When replacing the suction hose or receiver assembly, refill them with a specified amount of compressor oil, and then install them.

Compressor oil: SUN PAG 56

Quantity:
- Suction hose: 10 mL
- Receiver assembly: 10 mL
CONDENSER AND CONDENSER FAN MOTOR

REMOVAL AND INSTALLATION

Condenser fan motor removal steps
1. Condenser fan motor and shroud assembly
2. Condenser fan
3. Shroud
4. Condenser fan motor

Condenser removal steps
- Discharging and charging of refrigerant (Refer to P.55-9.)
- Air cleaner
- Engine coolant draining and supplying (Refer to GROUP 14 - On-vehicle service.)
- Radiator (Refer to GROUP 14.)
5. Discharge flexible hose and liquid pipe A connection
6. Condenser

REMOVAL SERVICE POINT

A DISCHARGE FLEXIBLE HOSE AND LIQUID PIPE A CONNECTION

Plug the disconnected pipe, hose and the condenser nipple not to let foreign matter get into them.

Caution
Seal the hoses completely, otherwise the compressor oil and receiver will absorb water vapour easily.
INSTALLATION SERVICE POINT

▶A◄ CONDENSER INSTALLATION

When replacing the condenser, refill it with a specified amount of compressor oil and install it. (to the vehicle).

Compressor oil: SUN PAG 56
Quantity: 15 mL

INSPECTION

CONDENSER FAN MOTOR CHECK

Check to be sure that the condenser fan motor operates when battery voltage is applied to terminal 1 and terminal 2 earthed.
VENTILATORS
REMOVAL AND INSTALLATION

Under cover removal
1. Under cover

Defroster nozzle and distribution duct removal steps
- Floor console assembly (Refer to GROUP 52A.)
- Instrument panel (Refer to GROUP 52A.)
2. Side defroster duct
3. Defroster nozzle assembly
4. Distribution duct assembly
5. Defroster garnish and photo sensor
6. Center duct assembly

Rear heater duct and foot distribution duct removal steps
- Front seat (Refer to GROUP 52A.)
- Floor console assembly (Refer to GROUP 52A.)
- Instrument panel and center reinforcement (Refer to GROUP 52A.)
7. Rear heater duct (R.H.)
8. Rear heater duct (L.H.)
9. Foot distribution duct

NOTE
For the center air outlet assembly and the side air outlet assembly, refer to GROUP 52A - Instrument panel.
Rear ventilation duct assembly removal steps

- Rear bumper (Refer to GROUP 51.)
- Rear ventilation duct assembly

NOTE
For the front deck garnish, refer to GROUP 51 - Windshield wiper and washer.
AUTOMATIC AIR CONDITIONER

GENERAL INFORMATION

The heater system uses a two-way-flow full-air-mix system that features high performance and low operating noise, and includes an independent face-directed air flow function. An air purifier which carries out fine A/C control has been included.

The A/C system is basically the same as the manual air conditioner in which a new refrigerant system has been adopted. However, an A/C control panel with a reduced number of buttons and more compact arrangement of necessary functions owing to more functions being assigned to each button has been adopted.

## INSPECTION PROCEDURES FOR DIAGNOSIS CODES

<table>
<thead>
<tr>
<th>Code No.11 or 12 Inside air temperature sensor system</th>
<th>Probable cause</th>
</tr>
</thead>
<tbody>
<tr>
<td>This diagnosis code is output if the inside air temperature sensor inside the A/C-ECU is defective.</td>
<td>• Malfunction of the A/C-ECU</td>
</tr>
</tbody>
</table>

Replace the A/C-ECU.
Code No.13 Outside air temperature sensor system (open circuit)

This diagnosis code is output if there is a defective connector connection, or if there is an open circuit in the harness.

Probable cause
- Malfunction of connector
- Malfunction of harness
- Malfunction of the outside air temperature sensor
- Malfunction of the A/C-ECU

Outside air temperature sensor check (Refer to P.55-68.)

OK

Replace

Measure at the outside air temperature sensor connector A-21.
- Disconnect the connector, and measure at the harness side connector.
- Voltage between terminal (1) and body earth
  OK: 5 V

OK

Check the following connectors:
C-05, C-64 <L.H. drive vehicles>, C-116 <L.H. drive vehicles>, C-99 <R.H. drive vehicles>

OK

Repair

NG

Check the trouble symptom.

NG

Replace the A/C-ECU.

NG

Measure at the A/C-ECU connector C-05.
- Connect the connector.
- Voltage between terminal (7) and body earth
  OK: 2.3 - 2.9 V

OK

Check the following connector:
C-05

OK

Repair

NG

Replace the A/C-ECU.

NG

Check the trouble symptom.

NG

Check the harness between the outside air temperature sensor and the A/C-ECU.

OK

Repair

NG

Check the harness between the outside air temperature sensor and the A/C-ECU, and repair if necessary.

NG

Replace the A/C-ECU.

Code No.14 Outside air temperature sensor system (short circuit)

This diagnosis code is output if there is a short circuit in the outside air temperature sensor input circuit.

Probable cause
- Malfunction of harness
- Malfunction of connector
- Malfunction of the outside air temperature sensor
- Malfunction of the A/C-ECU

Outside air temperature sensor check (Refer to P.55-68.)

OK

Replace

Measure at the A/C-ECU connector C-05.
- Connect the connector.
- Voltage between terminal (7) and body earth
  OK: 2.3 - 2.9 V

OK

Check the harness between the outside air temperature sensor and the A/C-ECU, and repair if necessary.
### Code No.15 Heater water temperature sensor system (open circuit)

This diagnosis code is output if there is a defective connector connection, or if there is an open circuit in the harness.

- Malfunction of connector
- Malfunction of harness
- Malfunction of the heater water temperature sensor
- Malfunction of the A/C-ECU

#### Heater water temperature sensor check (Refer to P.55-70.)

<table>
<thead>
<tr>
<th>NG</th>
<th>OK</th>
<th>Replace</th>
</tr>
</thead>
</table>
| Measure at the heater water temperature sensor connector C-70.  
  - Disconnect the connector, and measure at the harness side connector.  
  - Voltage between terminal (1) and body earth  
    OK: 5 V |
| NG | Check the following connectors:  
  C-05, C-64 <L.H. drive vehicles>  
  OK | NG |
| OK | Check the trouble symptom. |
| NG | Check the harness between the heater water temperature sensor and the A/C-ECU.  
  OK | NG |
| OK | Replace the A/C-ECU. |
| NG | Check the following connector:  
  C-05  
  OK | NG |
| OK | Check the trouble symptom. |
| NG | Replace the A/C-ECU. |

### Code No.16 Heater water temperature sensor system (short circuit)

This diagnosis code is output if there is a short circuit in the heater water temperature sensor input circuit.

- Malfunction of harness
- Malfunction of connector
- Malfunction of the heater water temperature sensor
- Malfunction of the A/C-ECU

#### Heater water temperature sensor check (Refer to P.55-70.)

<table>
<thead>
<tr>
<th>NG</th>
<th>OK</th>
<th>Replace</th>
</tr>
</thead>
</table>
| Measure at the A/C-ECU connector C-05.  
  - Connect the connector.  
  - Voltage between terminal (4) and body earth  
    OK: 2.3 - 2.9 V |
| NG | Check the following connector:  
  C-05  
  OK | NG |

| NG | Replace the A/C-ECU. |
**Code No.21 Air thermo sensor system (open circuit)**

This diagnosis code is output if there is a defective connector connection, or if there is an open circuit in the harness.

**Probable cause**
- Malfunction of connector
- Malfunction of harness
- Malfunction of the air thermo sensor
- Malfunction of the A/C-ECU

**Air thermo sensor check (Refer to P.55-26.)**

- **NG** Replace

Measure at the air thermo sensor connector C-73.
- Disconnect the connector, and measure at the harness side connector.
- Voltage between terminal (2) and body earth
  - **OK**: 5 V

- **OK**

Measure at the A/C-ECU connector C-05.
- Connect the connector.
- Voltage between terminal (8) and body earth
  - **OK**: 2.3 - 2.9 V

- **NG**

**Check the following connectors:**
- C-05, C-64 <L.H. drive vehicles>  
  - **OK**
  - **NG** Repair

**Check the trouble symptom.**

- **NG**

Check the harness between the air thermo sensor and the A/C-ECU.

- **OK**
  - **NG** Repair

Replace the A/C-ECU.

**Code No.22 Air thermo sensor system (short circuit)**

This diagnosis code is output if there is a short circuit in the air thermo sensor input circuit.

**Probable cause**
- Malfunction of harness
- Malfunction of connector
- Malfunction of the air thermo sensor
- Malfunction of the A/C-ECU

**Air thermo sensor check (Refer to P.55-26.)**

- **NG** Replace

Measure at the A/C-ECU connector C-05.
- Connect the connector.
- Voltage between terminal (8) and body earth
  - **OK**: 2.3 - 2.9 V

- **OK**

Check the harness between the air thermo sensor and the A/C-ECU, and repair if necessary.

- **OK**

Replace the A/C-ECU.
### Code No.31 Potentiometer system of air mix damper motor assembly

<table>
<thead>
<tr>
<th>Troubleshooting Steps</th>
<th>Probable cause</th>

INSPECTION PROCEDURE FOR TROUBLE SYMPTOMS

Inspection procedure 1

**Communication with the MUT-II is not possible.**

- If communication with all other systems is not possible, there is a high possibility that there is a malfunction of the diagnosis line. If communication with only the A/C is not possible, the cause is probably a malfunction of the diagnosis line or of the A/C-ECU power supply system (earth).

<table>
<thead>
<tr>
<th><strong>Probable cause</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>- Malfunction of connector or harness</td>
</tr>
<tr>
<td>- Malfunction of A/C-ECU</td>
</tr>
</tbody>
</table>

**Is communication between MUT-II and other system is possible?**

- **NO**
  - Check the MUT-II diagnosis line, and repair if necessary.
  - Measure at the A/C-ECU connector C-05.
    - Disconnect the connector, and measure at the harness side connector.
    - Voltage between terminal (18) and body earth
      - **OK**: Battery voltage - 2 V
  - Check the following connector: C-05
  - OK
  - NG
    - Repair
  - Check the trouble symptom.
  - NG
    - Check the harness between the diagnosis connector and the A/C-ECU, and repair if necessary.
    - NG
    - Repair
    - OK
    - Check the problem.
    - NG
    - Check the following connectors: C-05, C-20
    - NG
    - Repair
  - Replace the A/C-ECU.

- **YES**
  - Measure at the diagnosis connector C-20.
    - Voltage between terminal (11) and body earth
      - **OK**: Indication fluctuates between 0 V and 12 V.
  - Measure at the A/C-ECU connector C-05.
    - Connect the connector.
    - Voltage between terminal (17) and body earth
      - **OK**: Indication fluctuates between 0 V and 12 V.
  - Check the following connectors: C-05, C-20
  - NG
    - Repair
  - Check the problem.
  - NG
  - Measure at the A/C-ECU connector C-07.
    - Disconnect the connector, and measure at the harness side connector.
    - Voltage between terminal (28) and body earth
      - **OK**: Battery voltage
  - Measure at the A/C-ECU connector C-07.
    - Disconnect the connector, and measure at the harness side connector.
    - Continuity between terminals (27), (35) and body earth
      - **OK**: Continuity
  - Replace the A/C-ECU.
**Inspection procedure 2**

**Air conditioner does not operate.**

If the A/C does not operate when the A/C switch is on and the temperature setting is at 17°C, the cause is probably insufficient refrigerant, or a malfunction of the blower or of the magnet clutch power supply.

<table>
<thead>
<tr>
<th>Probable cause</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Malfunction of blower</td>
</tr>
<tr>
<td>- Insufficient refrigerant</td>
</tr>
<tr>
<td>- Malfunction of magnetic clutch</td>
</tr>
<tr>
<td>- Malfunction of air thermo sensor</td>
</tr>
<tr>
<td>- Malfunction of A/C compressor relay</td>
</tr>
<tr>
<td>- Malfunction of refrigerant temperature switch</td>
</tr>
<tr>
<td>- Malfunction of dual pressure switch</td>
</tr>
<tr>
<td>- Malfunction of connector or harness</td>
</tr>
<tr>
<td>- Malfunction of engine-ECU</td>
</tr>
<tr>
<td>- Malfunction of A/C-ECU</td>
</tr>
</tbody>
</table>

**Does the blower operate?**

- **NO**
  - Inspection procedure 7 (Refer to P.55-48.)

- **YES**
  - A/C system refrigerant pressure check (Refer to P.55-14.)

**MUT-II DIAGNOSIS CODE**

Is any of the codes 11, 21 and 22 output?

- **NG**
  - Is any of the codes 11, 21 and 22 output?

- **YES**
  - INSPECTION CHART FOR DIAGNOSIS CODES (Refer to P.55-37.)

- **NO**
  - Magnetic clutch check (Refer to P.55-7.)
  - A/C compressor relay check (Refer to P.55-17.)
  - Refrigerant temperature switch check (Refer to P.55-65.)
  - Dual pressure switch check (Refer to P.55-8.)

- **OK**
  - Inspection procedure 14 (Refer to P.55-53.)

- **NG**
  - Measure at the A/C compressor relay connector B-28X.
  - (1) Continuity between terminal (4) and body earth
    - **OK**: Continuity
  - (2) Voltage between terminal (5) and body earth
    - **OK**: Battery voltage
  - Check the following connector:
    - B-28X
    - (1) NG
    - **NG**
      - Check the following connectors:
        - B-28X, B-30, B-75
        - **NG**
  - Check the trouble symptom.
  - Check the harness between the magnetic clutch and the A/C compressor relay, and repair if necessary.
  - Check the trouble symptom.
  - Check the harness between the fusible link and the A/C compressor relay, and repair if necessary.

- **OK**
  - NG
  - **Repair**
Troubleshooting

**Inspection procedure 3**

**A/C graphic display on control panel is blank.**

The cause is probably a malfunction of the A/C-ECU power supply system (earth).

<table>
<thead>
<tr>
<th>Probable cause</th>
</tr>
</thead>
<tbody>
<tr>
<td>Malfunction of connector or harness</td>
</tr>
<tr>
<td>Malfunction of A/C-ECU</td>
</tr>
</tbody>
</table>

**Probable cause**

**Does the A/C operate?**

<table>
<thead>
<tr>
<th>YES</th>
<th>Replace the A/C-ECU.</th>
</tr>
</thead>
<tbody>
<tr>
<td>NO</td>
<td>Inspection procedure 13 (Refer to P.55-52.)</td>
</tr>
</tbody>
</table>

**Inspection procedure 4**

**Temperature cannot be set.**

The cause is probably a malfunction of the temperature setting signal input system or output system.

<table>
<thead>
<tr>
<th>Probable cause</th>
</tr>
</thead>
<tbody>
<tr>
<td>Malfunction of connector or harness</td>
</tr>
<tr>
<td>Malfunction of A/C-ECU</td>
</tr>
</tbody>
</table>

**Probable cause**

**Inspection procedure 5**

**A/C outlet air temperature does not increase.**

If the outlet air temperature does not increase when the temperature setting is increased, the cause is probably a sensor malfunction or a problem with operation of the air mix damper. The MUT-II can be used to check the diagnosis codes in order to check the cause of the problem for each separate system.

<table>
<thead>
<tr>
<th>Probable cause</th>
</tr>
</thead>
<tbody>
<tr>
<td>Malfunction of air mix damper motor potentiometer</td>
</tr>
<tr>
<td>Malfunction of air mix damper motor</td>
</tr>
<tr>
<td>Malfunction of air mix damper</td>
</tr>
<tr>
<td>Malfunction of connector or harness</td>
</tr>
<tr>
<td>Malfunction of thermostat</td>
</tr>
<tr>
<td>Malfunction of A/C-ECU</td>
</tr>
</tbody>
</table>

**MUT-II DIAGNOSIS CODE**

Is any of the codes 11, 12, 31 and 41 output?

<table>
<thead>
<tr>
<th>YES</th>
<th>INSPECTION CHART FOR DIAGNOSIS CODES (Refer to P.55-37.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>NO</td>
<td>Thermostat check (Refer to GROUP 14 - On-vehicle Service.)</td>
</tr>
</tbody>
</table>

**Thermostat check**

<table>
<thead>
<tr>
<th>NG</th>
<th>Replace</th>
</tr>
</thead>
<tbody>
<tr>
<td>OK</td>
<td>Replace the A/C-ECU.</td>
</tr>
</tbody>
</table>

**Inspection procedure 6**

**A/C outlet air temperature does not decrease.**

If the outlet air temperature does not decrease when the temperature setting is decreased, the cause is probably a problem in A/C system operation due to a sensor error, or a problem with operation of the air mix damper. The MUT-II can be used to check the diagnosis codes in order to check the cause of the problem for each separate system.

<table>
<thead>
<tr>
<th>Probable cause</th>
</tr>
</thead>
<tbody>
<tr>
<td>Malfunction of outside air temperature sensor</td>
</tr>
<tr>
<td>Malfunction of air mix damper motor potentiometer</td>
</tr>
<tr>
<td>Malfunction of air mix damper motor</td>

<tr>
<td>Malfunction of air thermo sensor</td>
</tr>
<tr>
<td>Malfunction of connector or harness</td>
</tr>
<tr>
<td>Malfunction of air mix damper</td>
</tr>
<tr>
<td>Malfunction of A/C-ECU</td>
</tr>
</tbody>
</table>

**MUT-II DIAGNOSIS CODE**

Is any of the codes 11, 12, 13, 21, 22, 31 and 41 output?

<table>
<thead>
<tr>
<th>YES</th>
<th>INSPECTION CHART FOR DIAGNOSIS CODES (Refer to P.55-37.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>NO</td>
<td>Does the A/C operate?</td>
</tr>
</tbody>
</table>

**Does the A/C operate?**

<table>
<thead>
<tr>
<th>YES</th>
<th>MUT-II DIAGNOSIS CODE</th>
</tr>
</thead>
<tbody>
<tr>
<td>NO</td>
<td>Replace the A/C-ECU.</td>
</tr>
</tbody>
</table>

**MUT-II DIAGNOSIS CODE**

Is any of the codes 11, 12, 13, 21, 22, 31 and 41 output?

<table>
<thead>
<tr>
<th>YES</th>
<th>INSPECTION CHART FOR DIAGNOSIS CODES (Refer to P.55-37.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>NO</td>
<td>Replace the A/C-ECU.</td>
</tr>
</tbody>
</table>

**Probable cause**
Inspection procedure 7

Blower does not operate.

If no air comes out of the blower even though the blower switch is on, the cause is probably a malfunction of the blower motor relay circuit.

**Probable cause**
- Malfunction of blower motor relay
- Malfunction of blower motor
- Malfunction of connector or harness
- Malfunction of A/C-ECU

**Inspection procedure 7**

**Blower does not operate.**

If no air comes out of the blower even though the blower switch is on, the cause is probably a malfunction of the blower motor relay circuit.

**Probable cause**
- Malfunction of blower motor relay
- Malfunction of blower motor
- Malfunction of connector or harness
- Malfunction of A/C-ECU

**Inspection procedure 13**

- Can an operating sound be heard when the blower speed change-over switch is operated?
  - **NO**
    - Inspection procedure 13 (Refer to P.55-52.)
  - **YES**
    - Blower relay check (Refer to P.55-16.)
    - Blower motor check (Refer to P.55-23.)

**Measure at the blower relay connector C-140.**
- **OK**
  - Disconnect the connector, and measure at the harness side connector.
  - **NG**
  - Check the harness between the blower relay and the body earth, and repair if necessary.

**Measure at the blower motor connector C-09.**
- **OK**
  - Disconnect the connector, and measure at the harness side connector.
  - **NG**
  - Check the trouble symptom.

**Check the following connector:**
- C-131
  - Check the trouble symptom.
  - NG
  - Check the harness between the blower relay and the blower motor, and repair if necessary.

**Check the following connector:**
- C-09
  - Repair
  - OK
  - NG
  - Check the trouble symptom.

**Check the following connector:**
- C-09
  - NG
  - Check the trouble symptom.
  - NG
  - Check the harness between the blower motor and the A/C-ECU, and repair if necessary.
### Inspection procedure 8

**Blower air amount cannot be changed.**

If the blower does not operate in any mode other than HI setting, the cause is probably a malfunction of the power transistor system.

<table>
<thead>
<tr>
<th>Probable cause</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• Malfunction of power transistor</td>
<td></td>
</tr>
<tr>
<td>• Malfunction of connector or harness</td>
<td></td>
</tr>
<tr>
<td>• Malfunction of A/C-ECU</td>
<td></td>
</tr>
</tbody>
</table>

#### Measure at the power transistor connector C-77.
- Blower switch position: LO
- Connect the connector.
1. Continuity between terminal (1) and body earth
   - OK: Continuity
2. Voltage between terminal (3) and body earth (Ignition switch: ON)
   - OK: Battery voltage - 2 V
3. Voltage between terminal (4) and body earth (Ignition switch: ON)
   - OK: Approx. 1.3 V

**OK**

**Check the following connector:**

<table>
<thead>
<tr>
<th>C-77</th>
</tr>
</thead>
<tbody>
<tr>
<td>OK</td>
</tr>
</tbody>
</table>

**NG**

**Check the trouble symptom.**

**Replace the power transistor.**

#### Measure at the A/C-ECU connector C-05.
- Blower switch position: LO
- Connect the connector.
1. Voltage between terminal (1) and body earth (Ignition switch: ON)
   - OK: Approx. 7 V
2. Voltage between terminal (2) and body earth (Ignition switch: ON)
   - OK: Approx. 1.3 V

**OK**

**Check the following connector:**

<table>
<thead>
<tr>
<th>C-05</th>
</tr>
</thead>
<tbody>
<tr>
<td>OK</td>
</tr>
</tbody>
</table>

**NG**

**Check the trouble symptom.**

**Replace the A/C-ECU.**

### Inspection procedure 9

**Air outlet port cannot be changed.**

The cause is probably a malfunction of the air outlet port changeover signal input system or output system. The MUT-II can be used to check the diagnosis codes in order to check the cause of the problem for each separate system.

<table>
<thead>
<tr>
<th>Probable cause</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• Malfunction of air outlet changeover damper motor potentiometer</td>
<td></td>
</tr>
<tr>
<td>• Malfunction of air outlet changeover damper motor</td>
<td></td>
</tr>
<tr>
<td>• Malfunction of air outlet changeover damper</td>
<td></td>
</tr>
<tr>
<td>• Malfunction of connector or harness</td>
<td></td>
</tr>
<tr>
<td>• Malfunction of A/C-ECU</td>
<td></td>
</tr>
</tbody>
</table>

#### Can an operating sound be heard when the air outlet port changeover switch is operated?

**NO**

**Inspection procedure 13 (Refer to P.55-52.)**

**YES**

**MUT-II DIAGNOSIS CODE**

Is either code 32 or code 42 output?

**NO**

**INSPECTION CHART FOR DIAGNOSIS CODES (Refer to P.55-37.)**

**YES**

**Air outlet changeover damper check**

**NO**

**Repair**

**OK**

**Replace the A/C-ECU.**
**Troubleshooting**

**Inspection procedure 10**

**Inside/outside air changeover is not possible.**

If inside/outside air changeover is not possible even when the inside/outside air changeover switch is on, the cause is probably a malfunction of the inside/outside air changeover damper motor.

<table>
<thead>
<tr>
<th>Probable cause</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Malfunction of inside/outside air changeover damper motor</td>
</tr>
<tr>
<td>- Malfunction of inside/outside air changeover damper</td>
</tr>
<tr>
<td>- Malfunction of connector or harness</td>
</tr>
<tr>
<td>- Malfunction of A/C-ECU</td>
</tr>
</tbody>
</table>

Can an operating sound be heard when the inside/outside air changeover switch is operated?

- **NO**
  - Inspection procedure 13 (Refer to P.55-52.)
- **YES**

**Inside/outside air changeover damper motor check (Refer to P.55-24.)**

- **NG**
  - Replace
- **OK**

Measure at the inside/outside air changeover damper motor connector C-78.
- Disconnect the connector, and measure at the harness side connector.
- Outside air select button: ON
  - Voltage between terminal (1) and body earth
    - **OK**: 10 V
- Inside air select button: ON
  - Voltage between terminal (2) and body earth
    - **OK**: 10 V

**Check the following connector: C-78**

- **NG**
  - Repair
- **OK**

Check the trouble symptom.

Check the tension between the inside/outside air changeover damper motor and the A/C-ECU, and repair if necessary.

**Replace the A/C-ECU.**

Check the following connector: C-78

- **NG**
  - Repair
- **OK**

Check the trouble symptom.

Replace the A/C-ECU.
Inspection procedure 11

Defroster function does not operate.  

If the defroster function does not operate when the defroster switch is turned on, the cause is probably a malfunction of the A/C or of the air outlet port changeover circuit.

<table>
<thead>
<tr>
<th>Probable cause</th>
</tr>
</thead>
<tbody>
<tr>
<td>Malfunction of air conditioner drive system</td>
</tr>
<tr>
<td>Malfunction of air outlet changeover damper drive system</td>
</tr>
<tr>
<td>Malfunction of connector or harness</td>
</tr>
<tr>
<td>Malfunction of A/C-ECU</td>
</tr>
</tbody>
</table>

---

**Can an operating sound be heard when the defroster switch is operated?**

| NO | Inspection procedure 13 (Refer to P.55-52.) |

**YES**

---

**Does the A/C operate?**

| NO | Inspection procedure 2 (Refer to P.55-46.) |

**YES**

---

**Can the air outlet port be changed over?**

| NO | Inspection procedure 9 (Refer to P.55-49.) |

**YES**

---

Air outlet changeover damper (for defroster) check

| NG | Repair |

| OK | Replace the A/C-ECU. |

---

Inspection procedure 12

Rear defogger does not operate.

If the rear defogger does not operate when the rear defogger switch is turned on (timer operates for 20 minutes), the cause is probably a malfunction of the A/C-ECU power supply system (earth).

<table>
<thead>
<tr>
<th>Probable cause</th>
</tr>
</thead>
<tbody>
<tr>
<td>Malfunction of connector or harness</td>
</tr>
<tr>
<td>Malfunction of A/C-ECU</td>
</tr>
</tbody>
</table>

---

**Can an operating sound be heard when the rear defogger switch is operated?**

| NO | Inspection procedure 13 (Refer to P.55-52.) |

**YES**

---

Replace the A/C-ECU.
Inspection procedure 13

A/C-ECU power supply circuit check

Measure at the A/C-ECU connector C-05.
- Disconnect the connector, and measure at the harness side connector.
- Voltage between terminal (3) and body earth
  OK: Battery voltage

NG

Check the following connectors:
- C-63, C-132, C-141 <L.H. drive vehicles>, C-62, C-14 <R.H. drive vehicles>

OK

NG

Repair

Check the trouble symptom.

NG

Check the harness between the A/C-ECU and the fusible link No.2, and repair if necessary.

OK

NG

Check the following connectors:
- C-63 <L.H. drive vehicles>, C-61 <R.H. drive vehicles>, C-132

OK

NG

Repair

Check the trouble symptom.

NG

Check the harness between the A/C-ECU and the junction block, and repair if necessary.

OK

NG

Check the harness between the A/C-ECU and the body earth, and repair if necessary.

NG

Repair

Check the following connector:
- C-07

NG

Replace the A/C-ECU.

Check the trouble symptom.
Inspection procedure 14

A/C compressor control circuit check

Measure at the A/C-ECU connector C-07.
- Blower switch and A/C switch: ON
- Setting temperature: 17°C
- Connect the connector.
- Voltage between terminal (34) and body earth (ignition switch: ON)
  OK: Battery voltage

OK

NG

Check the following connector:
C-07

OK

NG

Repair

Check the trouble symptom.

Replace the A/C-ECU.

Measure at the A/C compressor relay connector B-28X.
- Blower switch and A/C switch: ON
- Disconnect the connector, and measure at the harness side connector.
- Voltage between terminal (3) and body earth
  OK: Battery voltage

OK

NG

Check the following connectors:
C-116, C-67, C-14, C-64, C-07 <L.H. drive vehicles>
C-14, C-66, C-115, C-07 <L.H. drive vehicles>

OK

NG

Repair

Check the trouble symptom.

Check the harness between the A/C-ECU and the A/C compressor relay, and repair if necessary.

OK

NG

Repair

Check the trouble symptom.

Replace the engine-ECU.

**ON-VEHICLE SERVICE**

The service procedures are the same as for the manual air conditioner. (Refer to P.55-7.)
Removal steps
1. Center console panel and air conditioner control panel assembly
2. Center console panel
3. Air conditioner control panel and ECU assembly
DAMPER MOTOR ASSEMBLY AND POWER TRANSISTOR
REMOVAL AND INSTALLATION

Inside/outside air changeover damper motor assembly removal steps
- Glove box (Refer to GROUP 52A - Instrument Panel.)
1. Inside/outside air changeover damper motor assembly

Outlet air changeover damper motor assembly removal steps
- Lower cover (Refer to GROUP 52A - Instrument Panel.)
2. Outlet air changeover damper motor assembly

Air mix damper motor assembly removal steps
- Glove box, side cover, glove box frame, radio, tape player (Refer to GROUP 52A - Instrument Panel.)
- Under cover (Refer to P.55-33.)
3. Control relay bracket assembly
4. Air mix damper motor assembly

Power transistor removal steps
- Glove box (Refer to GROUP 52A - Instrument Panel.)
- Under cover (Refer to P.55-33.)
5. Power transistor

INSPECTION
INSIDE/OUTSIDE AIR CHANGEOVER DAMPER MOTOR ASSEMBLY CHECK
For inspection service points, refer to P.55-24 for heater and manual A/C.
AIR MIX DAMPER MOTOR ASSEMBLY CHECK

Motor
Check that the lever moves when battery voltage is applied across terminals 1 and 3 of the motor assembly connector. Check also that the lever moves in the backward direction when polarity is changed.

Caution
1. Cut off the voltage when the damper is in the MAX. HOT or MAX. COOL position.
2. Cut off the voltage if the motor does not turn when battery voltage is applied.

Potentiometer
Connect a circuit tester across terminals 2 and 5 of the motor assembly connector and check that resistance gradually changes as the damper is moved from MAX. HOT to MAX. COOL position.

Standard value:
- MAX. HOT position: Approx. 4.8 kΩ
- MAX. COOL position: Approx. 0.2 kΩ
AIR OUTLET CHANGEOVER DAMPER MOTOR ASSEMBLY CHECK

Motor
Check that the lever moves when battery voltage is applied across terminals 1 and 3 of the motor assembly connector. Check also that the lever moves in the backward direction when polarity is changed.

Caution
1. Cut off the voltage when the damper is in the DEF or FACE position.
2. Cut off the voltage if the motor does not turn when battery voltage is applied.

Potentiometer
Connect a circuit tester across terminals 5 and 6 of the motor assembly connector and check that resistance gradually changes as the damper is moved from DEF to FACE position.

Standard value:
- DEF position: Approx. 4.8 kΩ
- FACE position: Approx. 0.2 kΩ
**Compressor and Tension Pulley**

**Removal and Installation**

### Pre-removal Operation
- Discharging of Refrigerant (Refer to P.55-13.)

### Post-installation Operation
- Drive Belt Tension Adjustment
  (Refer to GROUP 11 - On-vehicle Service.)
- Charging of Refrigerant (Refer to P.55-9.)

---

**Removal steps**

1. Drive belt
2. Tension pulley
3. Hose connections
4. Power steering oil pressure switch harness <6A1>
5. Compressor<br>6. Compressor bracket
<4D6>

Removal steps

- Under cover
- Condenser fan motor (Refer to P.55-31.)

1. Drive belt (for compressor)
2. Tension pulley
3. Tension pulley bracket

4. Hose connections
5. Compressor
6. Drive belt (for power steering oil pump)
7. Power steering oil pump
8. Compressor bracket
REMOVAL SERVICE POINTS

**A** DRIVE BELT REMOVAL
1. Loosen the nut “A” for holding.
2. Loosen the bolt “B” <4G6 and 6A1> or nut “B” <4D6> for adjustment.
3. Remove the drive belt.

**B** HOSE DISCONNECTION
Plug the disconnected hose and the compressor nipple not to let foreign matter get into them.

**Caution**
Seal the hoses completely, otherwise the compressor oil and receiver will absorb water vapour easily.

**C** COMPRESSOR REMOVAL
When doing this work, be careful not to spill the compressor oil.
INSTALLATION SERVICE POINT

▶A-COMPRESSOR INSTALLATION

If a new compressor is installed, first adjust the amount of oil according to the procedures described below, and then install the compressor.

1. Measure the amount (X mL) of oil within the removed compressor.
2. Drain (from the new compressor) the amount of oil calculated according to the following formula, and then install the new compressor.

New compressor oil amount

\[120 \text{ mL} - X \text{ mL} = Y \text{ mL}\]

**NOTE**

(1) Y mL indicates the amount of oil in the refrigerant line, the condenser, the evaporator etc.
(2) When replacing the following parts at the same times as the compressor, subtract the rated oil amount of the each part from Y mL and discharge from the new compressor.

**Quantity**

- Evaporator: 60 mL
- Condenser: 15 mL
- Suction hose: 10 mL
- Receiver: 10 mL
INSPECTION

REFRIGERANT TEMPERATURE SWITCH SIMPLE CHECK

When the A/C is off, check that there is continuity between the refrigerant temperature switch terminals. If no, replace the refrigerant temperature switch.

COMPRESSOR MAGNETIC CLUTCH OPERATION CHECK

Connect the battery (+) terminal to the compressor side terminal, and earth the battery (-) terminal to the body of the compressor. The condition is normal if the sound of the magnetic clutch (click) can be heard.

MAGNETIC CLUTCH AND REFRIGERANT TEMPERATURE SWITCH

DISASSEMBLY AND REASSEMBLY

Magnetic clutch disassembly steps

1. Bolt <4G6>
2. Pulley <4G6>
3. Nut
4. Armature plate
5. Shims
6. Snap ring
7. Rotor
8. Snap ring
9. Clutch coil
10. Refrigerant temperature switch removal
DISASSEMBLY SERVICE POINT

- NUT REMOVAL

REASSEMBLY SERVICE POINTS

- CLUTCH COIL INSTALLATION
  When installing the clutch coil to the A/C compressor body, install so that the pin hole of the A/C compressor body and the clutch coil projection are aligned.

- SNAP RING INSTALLATION
  Install the snap ring so that the tapered surface is at the outer side.

- ARMATURE PLATE INSTALLATION
  Align the mating mark of the crankshaft spline and the mating mark of the armature plate, and then fit them together.

- NUT INSTALLATION
  Use the special tool to hold the magnet clutch, and tighten the nut in the same manner as removal.

- AIR GAP ADJUSTMENT
  Check whether or not the air gap of the clutch is within the standard value.
  **Standard value: 0.40 - 0.65 mm**

  **NOTE**
  If there is a deviation of the air gap from the standard value, make the necessary adjustment by adjusting the number of shims.
PHOTO SENSOR
REMOVAL AND INSTALLATION

Removal step
1. Photo sensor

REMOVAL SERVICE POINT
PHOTO SENSOR REMOVAL
Use a flat-tipped screwdriver (width: 3 mm or less) to remove the photo sensor.

INSPECTION
If the blower speed drops when the receiver section of the photo sensor is covered with your hand, then the photo sensor is normal. If the speed does not drop, replace the photo sensor.
Outside air temperature sensor

Pre-removal and Post-installation Operation
- Front Bumper Removal and Installation (Refer to GROUP 51.)

Outside air temperature sensor

**INSPECTION**

When the resistance value between the sensor terminals is measured under two or more temperature conditions, the resistance value should be close to the values shown in the graph.

**NOTE**

The temperature conditions when testing should not exceed the range of the characteristic curve in the graph.
HEATER WATER TEMPERATURE SENSOR

REMOVAL AND INSTALLATION

Pre-removal and Post-installation Operation
- Lower Cover and Side Cover Removal and Installation (Refer to GROUP 52A - Instrument Panel.)
- Engine-ECU, A/T-ECU and A/T Control Relay Removal and Installation (Refer to GROUP 52B - SRS-ECU.)

Caution: SRS
When removing and installing the engine-ECU, A/T-ECU, A/T control relay and clip from vehicles equipped with SRS, do not let them bump against the SRS-ECU.

Removal steps
1. Heater water temperature sensor clip
2. Heater water temperature sensor

REMOVAL SERVICE POINT
HEATER WATER TEMPERATURE SENSOR CLIP AND HEATER WATER TEMPERATURE SENSOR REMOVAL
Pull out the heater water temperature sensor clip which is at the bottom of the heater unit, and then remove the heater water temperature sensor from the heater unit.

INSTALLATION SERVICE POINT
HEATER WATER TEMPERATURE SENSOR AND HEATER WATER TEMPERATURE SENSOR CLIP INSTALLATION
Insert the heater water temperature sensor into its mounting hole at the bottom of the heater unit, and then fix it by inserting the heater water temperature sensor clip.
INSPECTION

When the resistance value between the sensor terminals is measured under two or more temperature conditions, the resistance value should be close to the values shown in the graph.

NOTE
The temperature conditions when testing should not exceed the range of the characteristic curve in the graph.

OTHER MAINTENANCE SERVICE POINTS

The following maintenance service points are the same as for the manual A/C.
